Among all 8112 respondents, 3644 of them had smoked cigarettes, that is, 44.92% of the population. 53.07% of these people started smoking at an early age of 15-19 years old, and 28.05% of them started smoking even younger, at an age of 10-14 years old. Youth use of tobacco therefore seems to be a crucial problem in Canada. Also, this results further confirms discovery of an early research in the United States which suggests that “nearly 9 out of 10 adults who smoke cigarettes daily first try smoking by age 18” (@citeDHHS). Compare to proportion of teenager smokers, people who start smoking at an elder age is significantly smaller.
